PROJECTS

Nirapod — National VAT & Tax Management System

github.com/abdulmmh/nirapod

Tech Stack: Java • Spring Boot • Spring Security • Angular • Android • MySQL • REST API • JWT • JPA/Hibernate • Maven

Designed and developed a multi-module enterprise-style VAT and tax administration platform with integrated web and Android applications, covering taxpayer registration, TIN/VAT management, tax returns, payments, refunds, audit, certificates, fiscal year administration, reports, and role-based user management.

Architecture & Contributions:

- System Architecture:** Designed and developed the entire system independently, applying maintainable and scalable full-stack engineering practices.
- Backend Development:** Built backend services using Spring Boot layered architecture and designed JPA/Hibernate persistence workflows.

- **API & Security:** Developed secure REST APIs with Spring Security and JWT token-based authentication and authorization.
- **Web Frontend:** Built a modular Angular web application utilizing reusable components for clean state management.
- **Mobile & Integration:** Developed an Android application with seamless integration and end-to-end workflow support.

abdulmmh.github.io — Personal Portfolio Website

GitHub | Live Demo

Tech Stack: HTML • CSS • JavaScript

Designed and developed a responsive portfolio website to showcase software projects, skills, education, and contact details.

- Designed responsive layouts using clean, semantic HTML and CSS.
- Deployed and maintained code repository using GitHub Pages.

website-for-bangladesh-cricket — Web Development Project

GitHub | Live Demo

Tech Stack: HTML • CSS • JavaScript

First complete web project practicing frontend engineering concepts, creating a team website with stats, schedules, and player profiles.

- Created structured, responsive layouts optimized for mobile and desktop screens.
- Hosted code repository on Git and deployed site using GitHub Pages.
